SAREM MAKINA CUTTING DEVICES

Our fully automated guillotine and planetary saws are designed to give precise and smooth cutting from 016 mm to 0500 mm diameters pipes without ovality.

Especially for PP pipes guillotine saws are used.

PP pipe Cutting devices are PLC controlled and fully automated to prevent ovality.

For PE pipes from 032 mm to 0500 mm planetary saws are used.

PE Cutting Devices are flash free operating and synchronized to speed of line by a servo motor.

Pipe diameters are sensed automatically by cutting device, therefore there is no need of clamps for each diameter of pipe.

One of the special features of our PE pipe Cutting device is the ability to cut 0250 mm of length of pipe at 8 different length of pipes one after each other .
